

CONTENTS

Abstract	1
1. Introduction	2
2. Experiment and Data Analysis	5
2.1. Observing instruments at Mizuho and Syowa Stations.	5
2.2. Locations of the stations.	7
2.3. Data analysis.	8
3. Estimation of Latitude of Auroral Breakup Event.	13
3.1. Relationship between auroral motion and magnetic variation.	13
3.2. Estimation of latitude of auroral breakup region from magnetic data	17
4. Spectra of the Pi Pulsations.	19
4.1. Examples of the Pi spectra	19
4.2. Relationship between Pi2 period and latitude of auroral breakup region: Case study	24
4.3. Spectral features of the Pi2 associated with the multiple onset substorm	29
4.4. Relationship between Pi2 period and latitude of auroral breakup region: Statistical study.	33
4.5. Latitudinal dependence of Pi2 amplitude	34
4.6. Summary of the spectral features of the Pi2	38
5. Polarization of the Pi2 Pulsations	39
5.1. Spatial distribution of Pi2 polarization in the auroral region.	39
5.2. Polarization characteristics of Pi2 pulsations observed in an equatorward region of the auroral breakup region	40
5.3. Polarization characteristics of Pi2 pulsations observed in a poleward region of the auroral breakup region	42
5.4. Polarization characteristics of Pi2 pulsations when the associated auroral breakup event occurred between Syowa and Mizuho	43
5.5. Pi2 polarization characteristics across the auroral breakup region: Statistical study.	46

6.	Conjugate Relationship of Pi2 Pulsations	49
6.1.	Example of Pi2 pulsations simultaneously observed at Syowa and Reykjavik	49
6.2.	Pi2 polarization characteristics at conjugate-pair stations: Case study	51
6.3.	Pi2 polarization characteristics at conjugate-pair stations: Statistical study	54
7.	Discussion	56
7.1.	Interpretation of wave phase relations of Pi2 pulsations at conjugate-pair stations.	56
7.2.	Interpretation of dominant periods in Pi2 pulsations	57
7.3.	Latitudinal profile of Pi2 amplitudes.	62
7.4.	Interpretation of Pi2 polarization features	63
7.5.	Generation mechanism of Pi2 pulsations.	65
7.6.	Future work	69
8.	Concluding Remarks	71
	Acknowledgments	72
	References.	74
